| Circuit no. | Part no. | Description            |
|-------------|----------|------------------------|
| F902        | 252075   | 2.5A-SE-EAK, Primary   |
| F903        | 252075   | 2.5A-SE-EAK, AC outlet |
| F906        | 252070   | 1A-SE-EAK, Secondary   |

**2. Change of FM/AM band step.**

With the exception of the models below, a BAND STEP selector switch is not provided.

(FM)

| MODEL | BAND STEP    | D717, J753 | R119      |
|-------|--------------|------------|-----------|
| UD    | 200kHz→50kHz | Additional | 15kΩ→24kΩ |
| UG/UQ | 50kHz→200kHz | Eliminated | 24kΩ→15kΩ |

(AM)

| BAND STEP   | D716, J754 |
|-------------|------------|
| 10kHz→ 9kHz | Additional |
| 9kHz→10kHz  | Eliminated |

In D716/7 1SS133 (Part No. 223163) is used. In J753/4, a jumper lead must be inserted. R119, with the muting amplitude determined is on the back panel side of FM/AM tuner and selector circuit printed circuit board assembly test points TP-1 and TP-2.

**3. Memory preservation**

This unit does not require memory preservation batteries. A built-in memory power back-up system preserves contents of the memory during power failures and even when the unit is unplugged. The unit must be plugged in and the power switch turned on and off once in order to charge the back-up system. Note that since this is not a permanent memory the power switch must be turned on and off a few times each month to keep the back-up system operative. The period of time during which memory contents are preserved after power has last been turned off varies depending on climate and placement of the unit. On the average, memory contents are protected over a period of 3 to 4 weeks (a minimum of 2 weeks) after the last time power has been turned off. This period is shorter when the unit is exposed to very high humidity or used in an area with an extremely humid climate.
